

Measuring Guide

How To Get Started Measuring Your Kitchen For Custom Drawers

Follow these 5 Simple Steps

Our easy to use Measuring Guide is a convenient place to store and organize the information you gather, as you collaborate with your designer and plan for your project. Use these tools to sketch out your idea or present us with a drawing of your own. If you have questions or need assistance just give us a call at [561.313.7275](tel:561.313.7275)

Step 1: Sketch the outline

Sketch the basic shape of your kitchen. Be sure to include any obstacles or structural features.

Step 2: Fill it in

Now draw in any doorways, windows, or other features that will dictate where you can install your cabinets. Mark everything clearly and create labels for each measurement of where cabinets will be installed. (see example on this page).

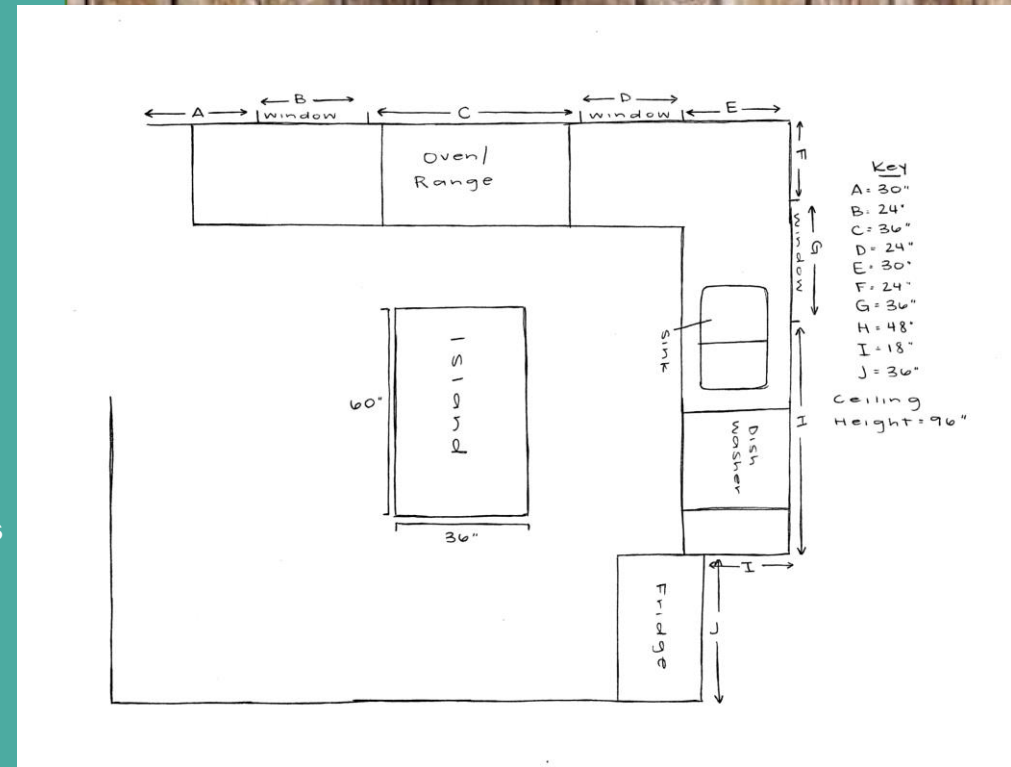

Step 3: Measure

Finally break out your tape measure and record measurements for all of the openings you labeled in the step above. Measure from outside edge to outside edge. If need be round up to the nearest inch. Remember this is just to get started with your design, and we can get exact measurements as we progress.

Step 4: Add your appliances

You should have an idea for where your appliances will be; for example: sink, dishwasher, refrigerator, or any other appliances. Make sure to include this in your drawing, with the measurements of them.

Step 5: Snap Some Pics!

Your Sketch
